DETAILED ACTION

1. This Office Action is in response to Applicant's amendment filed on August 24, 2001. Claims 1-6, 8, 13 and 18 have previously been canceled. Claims 7, 9-12, 14-17 and 19-22 are pending.

Allowable Subject Matter

2. Claims 7, 9-12, 14-17 and 19-22 have been allowed.

The following is an examiner's statement of reasons for allowance:

The instant Application claims a method and device for providing security to a chaining of operation performed by an electronic circuit executing on an algorithm by inserting one or more dummy operations of the same type in the chaining of useful operations. The closest prior art, Ugon, teaches improved integrated circuit has means for decorrelating the running of at least one instruction sequence of a program from the internal or externals of the circuit. The decorrelation means comprises random number generator which makes it possible to de-synchronize the execution of the program sequence in the processor or the execution of secondary sequences in which the instructions and execution times are different and which are selected at random. Ugon does not teach randomly introducing at least one dummy operation of the same type in the chaining of useful operations; and maintaining a constant time interval between executions of two successive useful operations. The second prior art, Cohen, teaches technique for arbitrary inserting garbage (or dummy) instruction without altering the effective program execution for fooling programs that look for specific instruction

sequences to increase time required for an attack to an intolerable level. Neither the cited prior art or the art of record anticipate the claimed feature or render the claimed limitation obvious.

Conclusion

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
